

Read Me First

This is the very important information, you need to know, before just starting importing and install.

- *I have not installed this before.*
- Just follow the setup guide for the SQL and the user guides for the software. First you install the XAMPP, then you import the guppy_sql database into XAMPP, then you copy the IKGH folder into the correct folder and finally you open the MS ACCESS Guppy Show Master.
- *I already have Guppy Show Master installed.*
- Good or you, but with this version comes a new SQL database with trainees tables and a new colorful interface for the judges, so you need to reinstall that too.
- *How do I reinstall the SQL database?*
- Since you already have XAMPP installed, just open XAMPP, go to your admin page (see the user guide for SQL database), select your guppy_sql database and delete it. Then reinstall the new version, following the installation guide.
- *How do I reinstall the Guppyshow library for the judges tablets?*
- Just delete the complete folder "IKGH" in your library C:\xampp\htdocs\ and copy the new version to C:\xampp\htdocs\
- *What will happen when the new standards A1-A5, B1-B4, C1-C4 replace the existing standards 1-13?*
- No problem. The program is designed to automatic change between the existing standard and the new standard, depending on the date, so you don't have to think about that.

The Guppy Show Master software is now redesigned, so everyone can add new breeders and clubs. By doing this, I have made an open software, not depending on one programmer. This leaves the program as a everlasting program for everyone to use and change as they like.
